

# BOOKIFY

## Phase-2 Deliverable:

- Plan and outline the deliverables for phase 2 of Bookify
- Break down the tasks into a detailed list, including specific features, functionalities, or components that will be completed in each phase
- Navigation - Corey
  - Multiple select options for different endpoints of the site
  - Written using Javascript to route the user to their destination endpoint
- Shopping Cart/Checkout - Kristiana
  - Stores selected items from user
  - If no items in cart, user cannot move to checkout
  - mongoDB will be used as a database for holding clients cart details
  - mongoDB will also be used as a database to store all items in the store. Each user will be able to have their own access to what they hold onto from the store
- Bookshelf - Andrew
  - Will store books into specialized database for the user
  - When the user presses 'add to bookshelf', book will be stored into a unique database for the user
  - The user will be able to also organize their books by genre, alphabetical order or by author.
  - If the user is not signed in, the user will not be able to access the database until they sign in
- Tasks
  - Our names are next to each part of the project that we are responsible for.
  - If there are any questions on a part, we'll help each other through what we need help with.
