BOOKIFY

Phase-1 Deliverable:
- Plan and outline the deliverables for phase 1 of Bookify
- Break down the tasks into a detailed list, including specific features, functionalities, or components that will be completed in each phase
- Book details - Andrew
    - Have info for the books.
    - Written using mongoDB and the db.(book collection).find()
- User Profiles - Corey
    - Sign into a user's account
    - If the information does not match, display an error message.
    - mongoDB will be used as a database for holding onto this information
- Search Bar - Kristiana
    - Locate book titles based on the title of the book
    - When searched, a list of books will appear
    - To do this, we will have to access a database that has a large collection of books, meaning we need an API to connect with the book details from mongoDB
- Tasks
    - Our names are next to each part of the project that we are responsible for.
    - If there are any questions on a part, we'll help each other through what we need help with.
